

EXAMINING THE DIFFERENCE:

Legacy Endpoint Security vs the CrowdStrike Falcon Platform

Conventional defenses no longer work against unconventional attacks.
CrowdStrike unifies technology, intelligence and expertise into one solution that's tested and proven to stop breaches.

See the difference the CrowdStrike Falcon® platform can make for you.

BEFORE

Limited visibility into endpoint activity leads to a false sense of security

Low confidence in detections has teams ignoring alerts or turning to other security solutions to triage and investigate – adding time and complexity

Performance issues from bloated agents

Declining service from support – many can't get a response

And the same complex architecture challenges they've had for years: fragile upgrades, required scans and on-premises server maintenance

AFTER

Clarity | Provides the right data, at the right time for confident action

Operational Resilience | A cloud-native architecture eliminates infrastructure complexity and simplifies deployment and on-going maintenance

Single Lightweight Agent | Deploys and is operational in minutes with zero impact on the endpoint

Cutting Edge Defenses | Protect against known and unknown and malware-free or fileless attacks

Force Multiplier | Allows teams with varied skillsets and expertise to work at the highest level

“Making the switch from traditional AV/Malware solutions to Falcon has been one of best decisions for us.”

What do customers have to say about **CrowdStrike**?

If you could start over,
what would your organization do differently?
“We would get Falcon earlier.”
